

## 2008+ Subaru Impreza Rear Shock Spring Seat Installation

After removing the spring from the original shock, knock off the bump stop landing pad from the shock body.

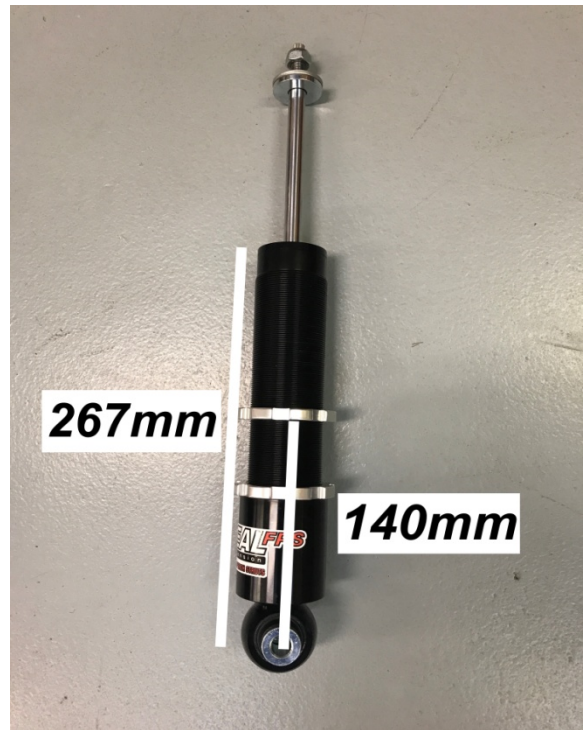

Then knock off the spring seat from the original shock.

Make a mark on the original spring seat in the same location as the photo below, then cut along the mark. After cutting the original spring seat, remove it completely from the original shock.

Remove the top locking collar from the Feal shock, slip spring seat over the Feal shock, and reinstall the top locking collar. Make sure the second larger locking collar is 140mm above the center of the eyelet.

Tighten the top locking collar with provided spanner wrench. Tap the end of the spanner wrench with a hammer to ensure it is tight. Make sure to install the two provided washers UNDER the top mount. The washer with the c-clip groove must go over the c-clip on the shock shaft. Reinstall spring.
